

Chemistry Department Research Director Interview Form

Student's Name:
Student's Major: <input type="checkbox"/> Analytical <input type="checkbox"/> Inorganic <input type="checkbox"/> Organic <input type="checkbox"/> Physical <input type="checkbox"/> Polymer

During the first semester, each entering chemistry graduate student must interview a minimum of **four** faculty members. This form should be signed by each faculty member interviewed. The interview process helps the student select a research director. Interviews also allow students to meet professors who might later serve on the student's committee. For these reasons, four interviews must be completed even though a student may have already identified his or her research director. The Department does not require the student to be in the same interest area as the Research Director. However individual professors may, at their discretion, accept only students in a particular area or areas.
